Audio / Video Editing

Video & Audio editing is the manipulation and arrangement of video & audio shots. Video & Audio editing is used to structure and present all video/ audio information, including films and television shows, video-advertisements and video essays. Video- Audio editing includes cutting segments (trimming), re-sequencing clips, and adding transitions and other Special - Effects. Video- audio editing is the process of editing segments of motion video production footage, special effects and sound recordings in the post-production process.
